Front Cover:

French bull dog

The origin of the French bull dog is believed to be from England. During the Industrial revolution they were brought over to France by unemployed Nottingham English lace workers seeking employment. The dog gained esteem in France and its demand increased. It gained popularity in England in the 1990's and later in the United States. As a companion dog the French Bull dog requires close contact with

humans. They have a patient character and are very good with children. As brachiocephalic dogs they have difficulty in body temperature regulation and must be protected from extreme heat. French bull dogs are prone to joint diseases, spinal problems cardiac defects and ophthalmological problems.
